POINT Notes on selection

(1) The screw is not equipped with an anti-rotation device, so please attach a guide or similar locking device to the tip of the screw prior to use. (If there is no anti-rotation device attached, the screw cannot extend or retract.) When connecting the anti-rotation device to the rod, do not use a floating joint. Please refer to page A-11 for the instruction details.
(2) The horizontal payload is the value when the actuator uses an external guide.
(3) The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for lead 2, if used vertically and for lead screw specification). The acceleration limit is the value indicated above.
(4) Do not apply an external force on the rod in any direction other than the direction the rod is moving in.
(5) If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.
(6) See page A-71 for details on push motion.

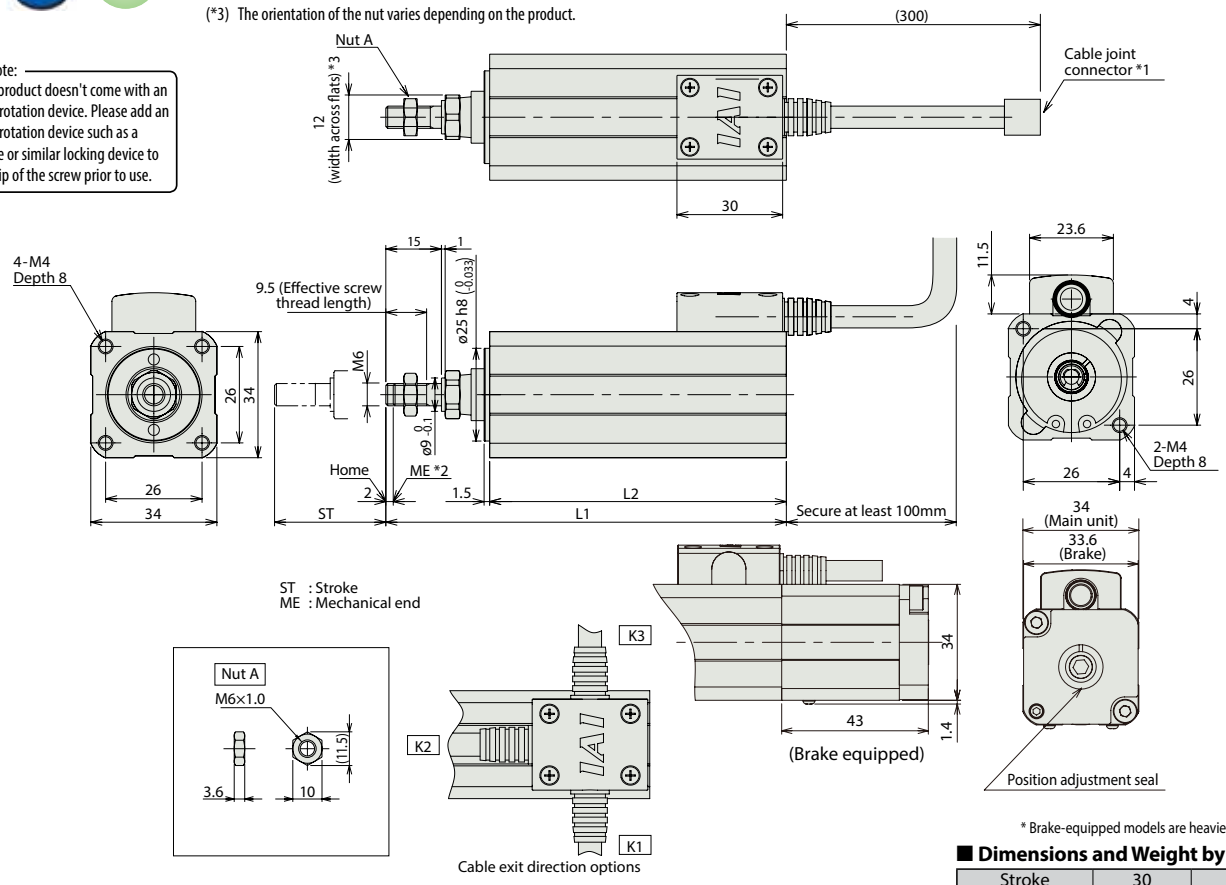
(*1) Connect the motor-encoder integrated cable here.
(*2) During home return, be careful to avoid interference from peripheral objects because the slider travels until the mechanical end.
(*3) The orientation of the nut varies depending on the product.

Note:
This product doesn't come with an anti-rotation device. Please add an anti-rotation device such as a guide or similar locking device to the tip of the screw prior to use.



* Brake-equipped models are heavier by 0.15kg.
