- POINT**  
Notes on selection
- The lead screw is not equipped with an anti-rotation device, so please attach a guide or similar locking device to the tip of the lead screw prior to use. (If there is no anti-rotation device attached, the lead screw cannot extend or retract.) When connecting the anti-rotation device and rod, do not use a floating joint. Please refer to page A-11 for the instruction details.
  - The horizontal payload is the value when the actuator uses an external guide.
  - The payload is the value when the actuator is operated at an acceleration of 0.3 G (0.2G for 2.5mm-lead) horizontally and 0.2G vertically. The acceleration limit is the value indicated above.
  - Do not apply an external force on the rod in any direction other than the direction the rod is moving in.
  - If the actuator is used vertically, pay attention to rod contact because the rod will come down when the power is turned off.
  - See page A-71 for details on push motion.
