Correlation Diagram of Speed and Load Capacity

With the RCP2 series, the load capacity will decrease as the speed increases due to the characteristics of the pulse motor used in the actuator. Use the table below to check if the desired speed and load capacity are satisfied.

- (1) When the stroke increases, the maximum speed will drop to prevent the ball screw from reaching a critical speed. Use the actuator specification table below to check the maximum speed at the stroke you desire.
- (2) The ERC2 series uses a pulse motor, so the load capacity will decrease as the speed increases. Use the correlation diagram of speed and load capacity on the right to check the load capacity corresponding to the speed you desire.
- (3) The load capacity is based on operation at an acceleration of 0.3 G (or 0.2 G if the lead is 3 or the actuator is operated vertically). This is the maximum acceleration.

Actuator Specifications

Lead and Load Capacity

(Note 1) Take note that the maximum load capacity will decrease as the speed increases.

| Model | Lead (mm) | Maximum load capacity (Note 1) | | Stroke (mm) |
|---------------------------|-----------|--------------------------------|---------------|----------------------------------|
| | | Horizontal (kg) | Vertical (kg) | |
| ERC2-SA6C-I-PM-12-①-②-③-④ | 12 | ~6 | ~1.5 | 50 ~ 600 (Set in 50-mm steps) |

* Refer to p. 31 of the front matter for details on the model specification items.

- (1) When the stroke increases, the maximum speed will drop to prevent the ball screw from reaching a critical speed. Use the actuator specification table below to check the maximum speed at the stroke you desire.
- (2) The ERC2 series uses a pulse motor, so the load capacity will decrease as the speed increases. Use the correlation diagram of speed and load capacity on the right to check the load capacity corresponding to the speed you desire. Subtract the guide weight (refer to the facing page) from the load capacity.
- (3) The load capacity is based on operation at an acceleration of 0.3 G (or 0.2 G if the lead is 3 or the actuator is operated vertically). This is the maximum acceleration.
- (4) The horizontal load capacity assumes use of an external guide.

Correlation Diagram of Speed and Load Capacity

With the RCP2 series, the load capacity will decrease as the speed increases due to the characteristics of the pulse motor used in the actuator. Use the table below to check if the desired speed and load capacity are satisfied.

Actuator Specifications

Lead and Load Capacity

(Note 1) Take note that the maximum load capacity will decrease as the speed increases.

| Model | Lead (mm) | Maximum load capacity (Note 1) | | Maximum push force (N) (Note 2) | Stroke (mm) |
|----------------------------|-----------|--------------------------------|---------------|---------------------------------|----------------------------------|
| | | Horizontal (kg) | Vertical (kg) | | |
| ERC2-RGS6C-I-PM-12-①-②-③-④ | 12 | ~25 | ~4.5 | 78 | 50 ~ 300 (Set in 50-mm steps) |
| ERC2-RGS6C-I-PM-6-①-②-③-④ | 6 | ~40 | ~12 | 157 | |
| ERC2-RGS6C-I-PM-3-①-②-③-④ | 3 | 40 | ~18 | 304 | |

Explanation of numbers ① Stroke ② I/O type ③ Cable length ④ Options

(Note 2) Refer to p. 406 for the graph of push force.

Stroke and Maximum Speed

| Stroke | 50 ~ 250 (Set in 50-mm steps) | 300 (mm) |
|---------|----------------------------------|-------------|
| Lead 12 | 600 | 500 |
| Lead 6 | 300 | 250 |
| Lead 3 | 150 | 125 |

(Unit: mm/s)

Options

| Name | Model | Page |
|-----------------------------|-------|------|
| Brake | B | P381 |
| Foot bracket | FT | P383 |
| Reversed-home specification | NM | P385 |

Actuator Specifications

| Item | Description |
|---|--|
| Drive method | Ball screw $\phi 10$ mm, rolled C10 |
| Positioning repeatability | ± 0.05 mm |
| Backlash | 0.1mm or less |
| Rod diameter | $\phi 22$ mm, dedicated SUS pipe |
| Rod non-rotation accuracy | $\pm 1.5^\circ$ |
| Ambient operating temperature, humidity | 0~40°C, 85% RH or below (non-condensing) |

Direction of allowable load moment
