- POINT** Notes on selection
- The payload is determined by the acceleration and duty. Verify the payload in the payload (horizontal) and acceleration chart at right.
The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.
 - The mounting position is horizontal-only. Please take care because the slider will drop down with power OFF when operating vertically.
 - Simple absolute unit cannot be used with the RCL series.

- Please take care because this type has magnetic flux leakage. (If magnetism is a problem, use SA1L/SA2L/SA3L)
- The payload is determined by the acceleration and duty. Verify the payload in the payload (horizontal) and acceleration chart at right.
The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.
- The mounting position is horizontal-only. Please take care because the slider will drop down with power OFF when operating vertically.
- Simple absolute unit cannot be used with the RCL series.

Pushing force guidelines

Pushing operation is possible within the range of numeric values listed below. (N)

Electric current limit	30%	40%	50%	60%	70%	80%
Pushing force	0.75	1	1.25	1.5	1.75	2

* The pushing forces listed above are for horizontal usage. If facing vertically upward, subtract 0.5N from the numeric values listed above, but if facing vertically downward, add 0.5N.

- POINT** Notes on selection
- The payload is determined by the acceleration and duty. Verify the payload in the payload (horizontal) and acceleration chart at right. The duty is $\frac{\text{Operating time}}{\text{Operating time} + \text{stop time}} \times 100$ per cycle.
 - If the actuator is operated vertically, use the optional brake specification.
 - Please use an external guide to avoid a horizontal or rotational load applied to the rod.
 - The pushing force fluctuation increases when the current limit is low.
 - Simple absolute unit cannot be used with the RCL series.
