POINT Selection Notes

(1) The actuator specifications display the payload's maximum value, but it will vary depending on the acceleration and speed. Please refer to "Table of Payload by Speed/Acceleration" for more details.
(2) The value of the horizontal payload assumes that there is an external guide. Please be aware that the anti-rotation stopper can be damaged when an external force is applied to the rod from any direction other than the moving direction.
(3) When performing a push-motion operation, pleasae refer to the "Correlation graph between push force and current limit value." Push force is only a Reference value. Please refer to P115 for details.
(4) Limit on duty may be needed depending on the ambient operation temperature. Please refer to P109 for details.
(5) Special attention needs to be paid to the mounting orientation. Please refer to P33 for details.

Dimensions

*1 When the rod is returning to its home position, please be careful of interference from surrounding objects, as it will travel until it reaches the M.E.
*2 The direction of width across flats varies depending on the product. Those flats cannot be used for reference plane.
