

Solenoid Gripper GRS

Small, affordable, easy to operate! The new Solenoid Gripper

1 Small size

Compact and lightweight electric gripper that fits in the palm of the hand.

2 Low price

The price is as low as an air chuck.

The motorization also contributes to energy saving.

ON/OFF control with a single wire

Opening and closing of the fingers are operated simply by ON/OFF signals. Continuous retention is possible while still in the gripping or release state. With just a single wire, wiring is easy too.

Outer diameter grip Inner diameter grip Automatic switch wiring x 2 Air piping (power, sensor signal wire) x 1 For air chuck solenoid gripper

$oxed{4}$ Long life

Excellent durability, enabling operation of 30 million times or more.*

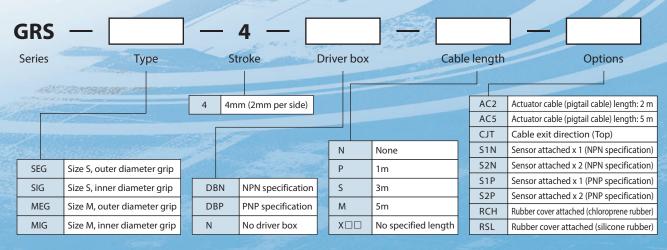

* Results of durability testing at IAI. Life under the user's operating conditions is not guaranteed.

■ GRS Series List

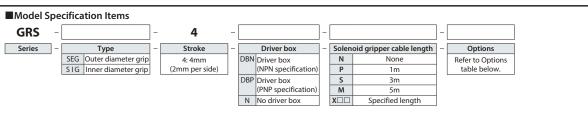

Model	Size S		Size	е М
Grip direction	Outer diameter grip	Inner diameter grip	Outer diameter grip	Inner diameter grip
Model	GRS-SEG	GRS-SIG	GRS-MEG	GRS-MIG
Outer dimensions [mm]	W26×D20×H68		W32×D	24×H78
Weight [kg]	0.16		0.27	
Opening/closing stroke [mm]	4 (2 per side)		4 (2 pe	er side)
Max grip force [N]	10 (5 per side)		20 (10 per side)	
Opening/closing time	0.03s or less		0.03s or less	
Operation frequency	120CPM		1200	СРМ
Reference page	P. 3		P. 5	

■ Model Specification Items

GRS-SEG/SIG

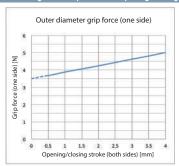

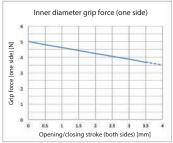

- (1) For outer diameter grip, it opens when conductive and closes when not conducting (normally closed). For inner diameter grip, it closes when conductive and opens when not conducting (normally open).
- (2) Since a spring is used for the grip mechanism, the grip force changes depending on the open/closing stroke of the fingers.
- (3) To operate the solenoid gripper, a driver box is essential. Please refer to P.8 for specification details.
- (4) Please refer to P.9 for gripper selection.

Correlation Diagram of Grip Force and Opening/Closing Stroke

(Note) The grip force changes depending on the open/closing stroke of the fingers.

Actuator Specifications

Rubber cover attached (silicone rubber)	RSL	

^(*1) Driver box: for DBN, only S1N and S2N can be selected. Driver box: for DBP, only S1P and S2P can be selected.

Actuator Specifications

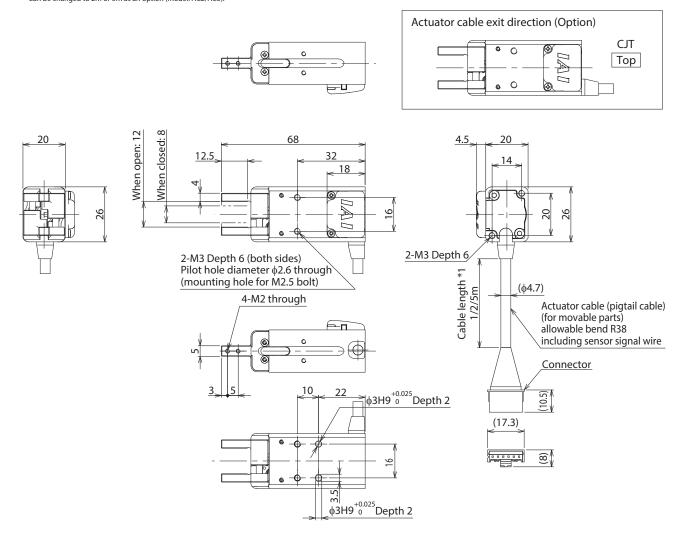

Item	Description
Max grip force	10N, one side 5N
Operating time	0.03s or less
Operation frequency	120CPM
Mass	0.16kg

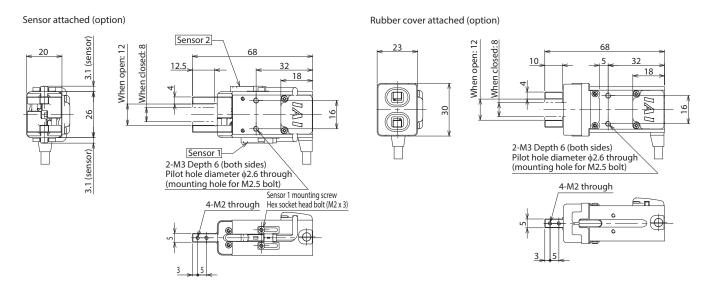

CPM: Cycle per minute

Item	Description	
Drive system	Grip mechanism (chuck): Compression spring + cam mechanism	
Drive system	Release mechanism (unchuck): Solenoid electromagnetism + cam mechanism	
Repeatability	±0.1mm	
Backlash	One side 0.5mm or less	
Finger guide	Slide guide	
Ambient operating temp. & humidity	0 to 40°C, 85% RH or less (Non-condensing)	
Degree of protection	IP20	
Vibration resistance / shock resistance	4.9m/s ² 100Hz or less	
Compliant international standards	CE marking, RoHS Directive	
Delivery date	Indicated in "Check Delivery Date" on the website	

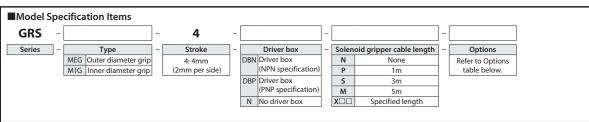

*1 The actuator cable (pigtail cable) is a robot cable. The actuator cable (pigtail cable) standard length is 1m. Can be changed to 2m or 5m as an option (model: AC2/AC5).

GRS-MEG/MIG

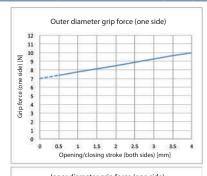

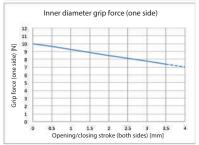

- (1) For outer diameter grip, it opens when conductive and closes when not conducting (normally closed). For inner diameter grip, it closes when conductive and opens when not conducting (normally open).
- (2) Since a spring is used for the grip mechanism, the grip force changes depending on the open/closing stroke of the fingers.
- (3) To operate the solenoid gripper, a driver box is essential. Please refer to P.8 for specification details.
- (4) Please refer to P.9 for gripper selection.

Dimensions

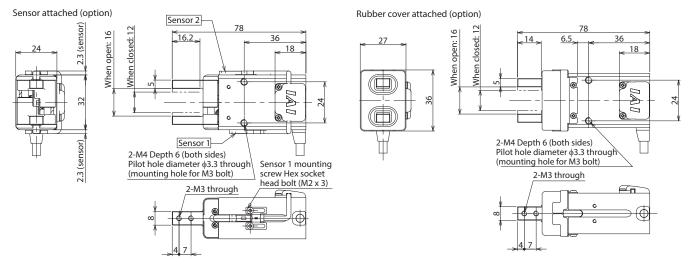

*1 The actuator cable (pigtail cable) is a robot cable.

The actuator cable (pigtail cable) standard length is 1m.

Can be changed to 2m or 5m as an option (model: AC2/AC5).

Options

Actuator's pigtail cable Specification

Model

AC2/AC5

Description

Although the standard length of the actuator's pigtail cable is 1m, it can be changed to 2m/5m as an option.

Cable exit direction (Top)

Model

CJT

Description

Although the standard outlet direction of the actuator's pigtail cable is on the side, it can be changed to the top outlet direction as an option.

Sensor

Model

S1N/S2N/S1P/S2P

Description

One or two sensors can be attached.

Applicable models	Sensor specification	r specification Number of sensors Single product model	
GRS-SEG/SIG	NPN	1	GRS-S1N-S
		2	GRS-S2N-S
	PNP	1	GRS-S1P-S
		2	GRS-S2P-S
GRS-MEG/MIG	NPN	1	GRS-S1N-M
		2	GRS-S2N-M
	PNP	1	GRS-S1P-M
		2	GRS-S2P-M

(When ordering by single product model number, a mounting bracket and bolts will also be included)

Rubber cover attached

Model

RCH/RSL

Description

Rubber cover can be added to opening/closing part of the chuck.

Applicable models	Rubber cover material	Single product model number	
GRS-SEG/SIG	RCH	GRS-RCH-S	
GRS-MEG/MIG	(Chloroprene rubber)	GRS-RCH-M	
GRS-SEG/SIG	RSL	GRS-RSL-S	
GRS-MEG/MIG	(Silicone rubber)	GRS-RSL-M	

(When ordering by single product model number, a mounting bracket and screws will also be included)

Driver Box

The driver box allows the solenoid gripper to operate by following ON/OFF signals from an external control device, and controlling the current to suppress solenoid gripper heat generation.

■Model Configuration

■Specifications

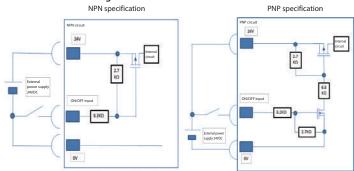

Item	Description		
Control target	GRS-S	GRS-M	
Control method	PWM current control		
Power supply voltage	24VDC ± 10%		
Maximum output current (Release initial instantaneous 40ms)	2.8A	3.7A	
Maximum power consumption (Release initial instantaneous 40ms)	74W	97W	
Power consumption for release retention (Release status retained)	2.0W	2.1W	
Power consumption for grip status	0W	0W	
Open/close signal input	Signal input dedicated for 24VDC (NPN/PNP selection)		
Position sensor signal output	Signal output dedicated for 24VDC (NPN/PNP selection)		
Indicator light	LED during release operation: Light ON (green) LED during gripping operation: Light OFF		
Manual switch	OFF during normal operation Manual switch ON is enabled only when open/close signal input is OFF		
Ambient operating temperature	0 to 40°C		
Ambient operating humidity	85% RH or less (non-condensing)		
Operating ambience	No corrosive gas		
Ambient storage humidity	-10 to 65°C		
Ambient storage temperature	90% RH or less (non-condensing)		
Degree of protection	IP20		
Mass	22g		
External dimensions	58mm (W) * 58.1mm (H) * 16mm (T)		

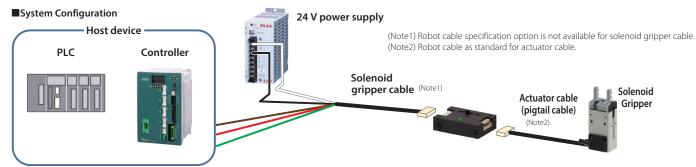

■Open/close Signal Input Specification

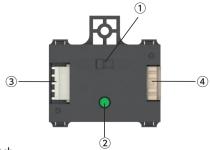

Item	NPN specification	PNP specification	
Input voltage	24V ±10%	24V ±10%	
Input current	2mA	2mA	
Leakage current	0.25mA Max	0.25mA Max	
Operating voltage	ON voltage: 6.0V or less	ON voltage: 18.0V or more	
	OFF voltage: Input voltage - 3.0V or more	OFF voltage: Input voltage 3.0V or less	
Isolation method	Isolation method Non-isolated Non-isolated		

■Internal Circuit Configuration

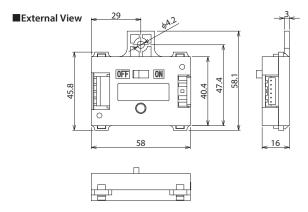

■Names of Each Part

- Slide switch
 For manual grip/release.
 (Enabled only when open/close signal from external device is OFF)
- ② LED display
 Light turns ON via signals from the external control device.
 Light is also ON during forced ON via slide switch.
- ③ Power/control device side connector Cables from power supply and host devices to be connected.
- 4 Gripper side connector For solenoid gripper connection.

■Signal Names (power/control device side)

Wire color	Signal name	Description	
White	24V	24VDC ±10% power input for driver box, solenoid gripper sensor	
Black	0V	0V(GND)	
Brown	ON/OFF	Open/close signal input of solenoid gripper	
Red	Sensor 1	Output of solenoid gripper sensor 1	
Green	Sensor 2	Output of solenoid gripper sensor 2	

Gripper Selection Method

Slide type

Step 1

Check the required grip force and allowable workpiece mass

Step 2

Check the gripping point distance

Step 3

Check external force applied to fingers

Step 1 Check the required grip force and allowable workpiece mass

When gripping the workpiece with frictional grip force, calculate the required grip force as follows.

(1) For normal transfer

- **F**: Grip force (N) ... Total sum of push forces of both fingers
- $\boldsymbol{\mu}\,$: Static friction coefficient between the finger attachment and the workpiece
- m: Workpiece mass (kg)
- g: Gravitational acceleration (= 9.8m/s2)
- The conditions under which the workpiece remains statically gripped without dropping are as follows:

$$F \mu > W$$
 $F > \frac{mg}{\mu}$

 Assuming a recommended safety factor of 2 for normal transfer, the required gripping force is calculated as follows:

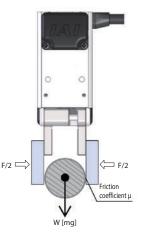

$$F > \frac{mg}{\mu} \times 2(\text{safety factor})$$

• When the friction coefficient is μ 0.1 ~ 0.2

$$F > \frac{mg}{0.1 \sim 0.2} \times 2 = (10 \sim 20) \times mg$$

For ordinary workpiece transferring

Required grip force: ▶ 10~20 times or more the workpiece mass Max. allowable mass: ▶ Not more than 1/10th to 1/20th the gripping force

*The greater the coefficient of static friction, the greater the maximum allowable workpiece mass. However, select a model that can generate a gripping force of at least 10 to 20 times this workpiece mass to ensure safety.

(2) When considerable acceleration, deceleration, or impact force is applied during transfer of the workpiece

In addition to gravity, a greater inertial force is applied to the workpiece. In this case, select a model with an even higher safety factor.

When large acceleration, deceleration, or shock is applied

Required grip force: ▶ 30~50 times or more the workpiece mass Max. allowable mass: ▶ Not more than 1/30th to 1/50th the gripping force

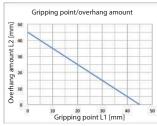

Step 2 Check the distance to the gripping point

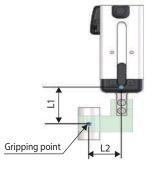

The distances (L1, L2) from the finger mounting surface to the gripping point have to fall in the ranges specified below. If the limits are exceeded, excessive moments may act upon the sliding part of the finger and internal mechanism and it could shorten the service life.

GRS-SEG/SIG

GRS-MEG/MIG

Even if the gripping point distance is within the limit range, keep the finger attachment as small and lightweight as possible. If the fingers are long and large, or if the mass is large, inertial force and bending moment during opening and closing may worsen the performance and adversely affect the guide section.

Gripper Selection Method

Step 3 Check external force applied to fingers

(1) Allowable vertical load

Make sure that the vertical load applied to each finger is less than the allowable load.

(2) Allowable load moment

Calculate Ma and Mc using value of L1 and L2. Make sure the moment applied to each finger is less than the maximum allowable load moment.

• The allowable external force when applying moment load to each claw is

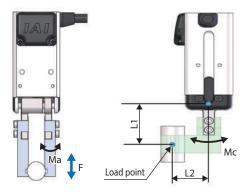

Allowable load F(N) > $\frac{\text{M (Maximum allowable moment (N·m)}}{\text{L(mm)} \times 10^{-3}}$

Calculate F(N) using L1 and L2.

Check that the external force applied to the finger is less than the calculated allowable load F(N) (the smaller value of L1 and L2).

Model	Allowable vertical load F (N)	Maximum allowable load moment (N·m)		
		Ma	Mb	Мс
GRS-SEG/SIG	150	0.62	0.62	0.99
GRS-MEG/MIG	240	1.08	1.08	2.64

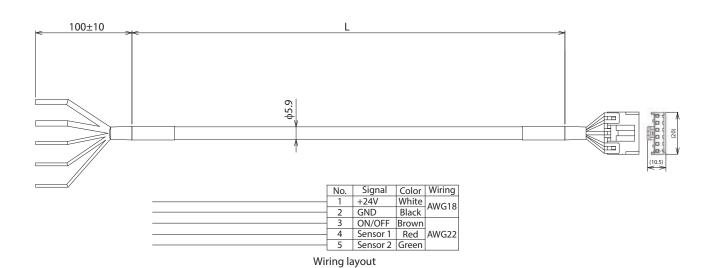

^{1.} The allowable value above indicates a static value. 2. Indicates the allowable value per finger.

- * The load point above indicates the load position on the fingers. The position varies depending on the type of load.
- Load due to grip force: Gripping point
- · Load due to grip force: Gripping point · Load due to gravity: Center mass location
- $\cdot \ \text{Inertial force during travel, centrifugal force during swivel: Center mass location}$
- The load moment is the total value calculated for each type of load.

^{*} The mass of the finger and the workpiece mass are also part of the external force. Other external forces applied to the fingers are the centrifugal force when swiveling the gripper with the workpiece attachment gripped and the inertia force due to acceleration/deceleration during travel.
