# CP4-GRSLL

RoboCylinder 2-Finger Gripper Vertical Large Slider Type

Model Description

RCP4 — GRSLL —

I: Incremental

\* The Simple absolute encoder is also considered type "I."

35P -30 -

30:1/30

Deceleration (11 mm per side) ratio

35P : 35 □ size

Pulse motor

**22** — 22:22 mm

P3: PCON-CA

MSEP-C

AC1: Actuator cable 1 m

NM : Non-motor end specification

N : None P : 1 m S : 3 m M : 5 m X □□ : Custom R □□ : Robot cable

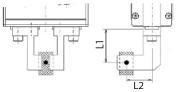

- (1) The maximum opening/closing speed indicates the operating speed on one side. The relative operating speed is twice this value.
- (2) The maximum gripping force is the sum of the gripping forces of both fingers, at a gripping point where there is no offset or overhand distance. The work part weight that can be actually moved depends on the friction coefficient between the gripper fingers and the work part, as well as on the shape of the work part. As a rough guide, a work part's weight should not exceed 1/10 to 1/20 of the gripping force. (See page 25 for details.)
- (3) The rated acceleration while moving is 0.3 G.

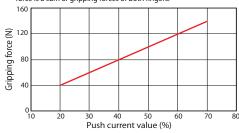

#### ■ Gripping Force vs. Electric Current Limit

The gripping (pushing) force can be adjusted freely within the range of electric current limits of 20% to 70%.

- \* Operate with the L1 distance under 100 mm.

  \* The gripping force in the graph below assumes that L1 and L2 the figure above are zero. (Refer to p. 26 for the rough guide gripping force at each distance of L1.) Also note that the gripping force is a sum of gripping forces of both fingers.

- $^*$  The gripping force graph above shows the number of references. Please allow margins up to  $\pm 15\%$
- \* Please note that, when gripping (pushing), the speed is fixed at 5 mm/s.

## 

- \*1 This is the maximum range over which the finger operates during home return operation, etc. Be careful not to let the finger contact the customer's finger, any nearby work part, etc.
- \*2 Be careful not to let the finger contact any nearby object or structure as it moves to the dimension in [] during home return.
- \*3 The actuator cable is a robot cable.
- \*4 Use all tap holes (4 locations) on the same mounting surface to secure the actuator.
- \*5 Do not screw in the bolt beyond the depth of the fixing tap hole. The internal parts may be damaged.
- \* The standard length of the actuator cable is 200 mm. The cable length can be changed to 1000 mm by selecting an applicable option (model: AC1).

#### Compatible Controllers

The RCP4 series actuators can operate with the controllers below. Select the controller according to your usage.
